

YELLOW PEEL BALM SYSTEM

Natural Lip Augmentation System

MMI SYSTEM
Skin Rejuvenation Program

YELLOW PEEL BALM SYSTEM is a natural lip augmentation system consisting of 2 separate phases, a **stimulation phase (yellow color)** and a **moisturizing phase (pearl color)**. The stimulation phase causes a **rapid vasodilation of the lip tissue** and consequently an increase in the **oxygen levels in this area** (collagen and elastin) as well as an increase in the **levels of glycosaminoglycans, (GAG's)**, this leads to an increase in the level of intradermal water retention, which in turn causes a rapid increase in the size of the lips, in a simple and physiologically correct manner. The **moisturizing phase** is important because it creates a protective barrier on the surface of the lips which inhibits water loss and consequently the loss of the lips volume. This is important to avoid drying of the lips whilst sleeping.

HOW TO USE:

PROFESSIONAL USE:

- Preparation of the labial mucous. Wash the labial mucous with **Face Body Cleanser 20%** (for 1 to 3 minutes).
- Apply the **Phase 1 stimulation (Yellow Peel Balm yellow color)**, to the upper and lip area, using the forefinger. The professional should explain to the patient the correct way to apply the product and at the same time examine the labial mucous so as to avoid side effects from patients that are contra indicated to this treatment (see below)

HOME USE:

Phase 1: Stimulation (yellow color) to the upper and lower lips, (mucous only), using the forefinger. **DO NOT APPLY TO THE CORNERS OF THE MOUTH- SEE BELOW** .

Re-apply every hour, until the lips reach the desired volume. (This normally happens on the 1st or 2nd day of treatment)

Phase 2: Moisturizing (pearl color): After the stimulation phase, described above, start the moisturizing phase. Always apply when the lips feel dry, and before bed time to protect against drying during sleep.

HOW TO MAINTAIN THE VOLUME OF THE LIPS:

To maintain the volume of the lips, apply the stimulation phase (**Yellow Peel Balm yellow color**), once a week, 3 or 4 times, or whenever you need to moisturize the lips, especially at bed time. **The Moisturizing Phase (pearl color)** should be applied several times a day, or when the lips are dry, especially before bedtime.

CAUTION:

Keep away from children. Not to be used during pregnancy. Not to be used on patients with crises of herpes or inflammatory processes; (acute or chronic) or any other type of lesions on the lips. **Do not apply to the corners of the mouth.** Do not swallow. Store in a cool dark place away from sunlight. If irritation develops, discontinue the use of the stimulation phase and use the hydration phase several times per day until the labial mucous is completely regenerated (healed)

DO NOT APPLY TO THE CORNERS OF THE MOUTH
